

Extendor[®]

When security really counts

PRODUCT GUIDE

When security really counts choose Extendor®

The Extendor® range of security grilles has been developed to meet the requirements of a wide range of users – from low risk domestic and small commercial applications through to the protection of high value equipment, products, documents and data.

The comprehensive Extendor® range, along with a variety of options and the bespoke design service, means that solutions can be successfully developed for almost any physical security issues.

Diamond

Like all products in the Extendor® range the Diamond has been designed with a high quality aesthetic appearance to visually blend with the surroundings. The Diamond is an excellent deterrent and offers good physical protection for internal installations.

The Extendor® range is available in a soft white finish, but can be supplied in any colour to suit customers' individual requirements.

All grilles are available with a range of options including multi-point locking.

Classic

Designed for more vulnerable areas, the Classic provides good resistance to attack and, coupled with an alarm system, offers a high level of protection.

As with all Extendor® products, the Classic can be easily opened during working hours, making the grille unobtrusive.

Elite

For higher levels of security, Elite provides an excellent level of protection. Hardened steel elements provide extra resistance to hacksaw or drill attacks and multi-point locking is fitted as standard. This provides an extra safety benefit because the grille can also be locked in the open position.

Elite is the preferred solution for many organisations with valuable items to protect and has been approved by the official police security initiative – Secured By Design (SBD). The police preferred SBD products are recommended by the Association of British Insurers (ABI).

Eclipse

The top of the Extendor® range Eclipse grille system has been especially developed to meet the modern day security needs of companies, organisations and authorities and is tested to British Government specifications.

In addition to its accredited protection properties, the Eclipse still retains the smooth action and user-friendly features of all Extendor® products, together with a high quality aesthetic finish.

Area Protection

The Extendor® range has been developed into an extremely effective method of creating high security areas within existing stores, warehouses or offices. High value items, sensitive data and confidential documents can be safely stored within a specially designed Extendor® cage system.

Server Protection

A further development of the Extendor® area protection system has resulted in a specialist protection cage for computer servers. The Extendor® system allows unrestricted airflow to maintain temperature and humidity control. Unlike enclosed cabinets, Extendor® area protection does not inhibit fire detection and suppression systems.

Custom Designed Solutions

The expertise of the design team enables solutions to be developed that match individual customer requirements. Innovations, such as area and server protection, were developed to meet customer needs. This knowledge is available to all customers, enabling installations to be tailored to meet precise requirements.

Experience built up over the years has enabled Extendor® products to be installed in many different environments, including listed buildings.
